

Jänkä Ranch

The Jänkä Villas are thoughtfully designed cabins that prioritise quality, sustainability, and durability. Constructed with precision, these state-of-the-art villas are built using custom log frames by Finnish lumber provider Honkatalot, ensuring they remain resilient for generations to come.

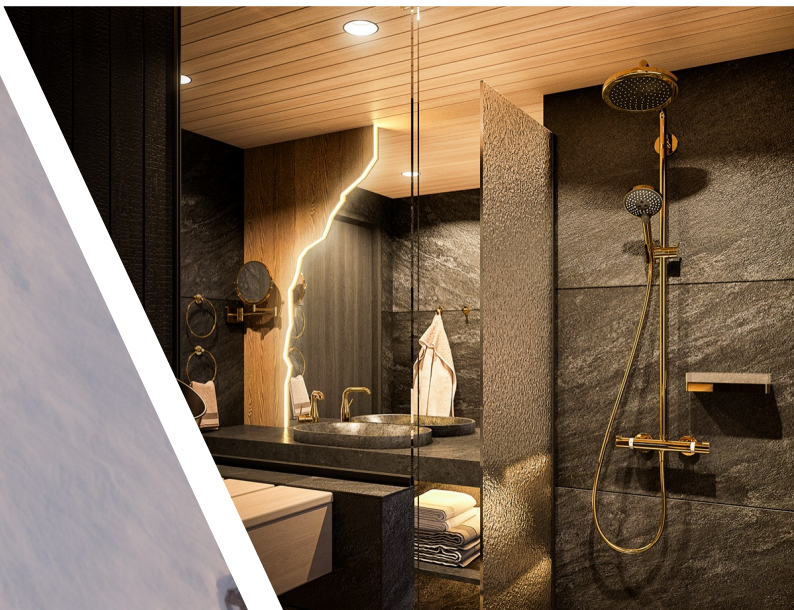

Geothermal heating offers an ecological alternative to traditional methods, providing energy efficiency while maintaining comfort. Additionally, each villa is equipped with a fireplace, enhancing the cosy atmosphere.

The lofted bedroom boasts a 4-metre skylight, offering stunning views of the night sky or the northern lights.

Privacy and relaxation are central to the design. Each villa is positioned in a fan-like layout to ensure maximum seclusion, allowing guests to fully unwind in the serene surroundings including each villa's own private outdoor jacuzzi.
